# Blockade™ Gold

## Key benefits

» Threat intelligence made easy

» Detect, monitor, and prevent network intrusion

» Find vulnerabilities faster so you can fix them quicker

» Dashboards and reports to tell you what's important to know

» Assurance report cards enable you to benchmark and report your risk and compliance posture

» Consultative guidance by leading security experts

» Meets a wide range of compliance and regulatory standards

## The core of your cybersecurity program

Companies are becoming more vulnerable to cyber attacks. Some may not have the cybersecurity manpower or expertise in-house or they may simply not be aware of the potential dangers.

Failure to put a tactical plan in-place can leave a business at risk. Turn to the leading security experts at Locknet® to help prevent data breaches with Blockade Gold.

Blockade Gold is a comprehensive Network Security Management solution featuring Managed Firewall and Vulnerability Management. Blockade Gold includes a wide range of security technologies that provide flexibility, reliability, and the performance you need for your network.

• **Managed Firewall** designed with industry leading technology and services to help businesses protect themselves against security threats. Locknet's managed services include appliance management and monitoring, gateway security, forensic analysis, reporting, support services and more.

• **Vulnerability Management** scans and evaluates vulnerability prone data across an organization, prioritizing security risks and providing a clear view of your company's security posture. Locknet's highly skilled security experts will monitor, analyze data, and work with you to report findings and provide recommendations so that you can keep your systems safe from harm.
